

MBFD BID

Complete Administrator Manual

Today · Department · Bid · History

October 2026

Use this manual alongside the searchable Docs page and the “How to use this page” explanation in each administrator workspace. The manual and live help use the same source content.

Approved policy and amendments determine the rules. This manual explains software operation and does not adopt policy, authorize a selection, or establish that every qualification is current.

Start at <https://bid.mbfdhub.com/admin> — administrator sign-in is required. Downloaded instructions remain readable offline; application links require a connection.

Contents

1. 2026 BID — QUICK START
2. Edit and save the Current Bid
3. Understand the Bid Blueprint, draft impact and decision traces
4. View history and restore earlier settings
5. Start a new annual Bid from saved structure
6. Create a Mock from an exact saved version
7. Review and create a Managed Live session
8. Set stage order, pools, fallback and A-Day rules
9. Read results for a selected Bid run
10. Record Bid rankings and completed Days tours
11. Find and update a Department member
12. Maintain Department staffing and organization
13. Maintain credential definitions
14. Import Department data
15. Navigate focused workspaces
16. Review source conflicts and record amendments
17. Change this bid after a Labor/Management decision
18. Import TargetSolutions credentials
19. Requirements and points
20. Qualification discrepancies
21. Qualification readiness
22. Temporary assignments and year-round operations
23. Create a bid session
24. Import qualification definitions
25. Choose a personnel import workflow
26. Tenure and Protection
27. Post-award Qualifications

56. [Common workflows](#)

57. [Troubleshooting & safety](#)

58. [Glossary](#)

1. 2026 BID — QUICK START

Bid

Verify the latest reviewed saved 2026 Bid and its on-screen readiness, then create or continue the intended Mock or Real run. The September 30 cutoff remains sealed; each run keeps its captured version. Real requires separate authorization.

Open: [Bid — 2026 readiness](#)

How to use it

1. Open Bid, keep year 2026, and verify the latest reviewed saved Bid in Version history. Read its on-screen version, source evidence, participant totals and open opportunities before creating a run. Continue an existing run only when its captured version is the version you intend to use. Saving a newer Bid never changes an existing run.
2. Read Biddable seat inventory in the readiness panel and compare it with the reviewed source. Open Opportunities & rules to inspect each shift and Days seat. In the reviewed 2026 inventory, B703 is Rescue Float Lieutenant #3; B704 through B706 are Rescue Float Firefighters #1 through #3. Do not infer a role from an old workbook label.
3. Open Participants & flow. Captains and Lieutenants use reviewed time-in-grade order; Firefighters use reviewed department-service order. Firefighter-DE remains Firefighter Bid rank with DE qualification separate. The October 1 Version 5 credential import has 3,884 source rows: 3,881 accepted, three rejected and zero pending. Accepted rows comprise 3,860 unchanged, eight reference-only, nine new qualifications and four missing-date fills; 13 qualification gains were recorded. Review its receipt in Department → Import data. Existing frozen Mock sessions keep their captured qualifications. Omission from an active-only report is not a revocation.
4. Open Marine evidence to review individual missing qualifications before expecting someone to appear for a Marine seat. Open A-Day and specialty rules to inspect the saved limits and deferred specialty timing. Missing person-specific evidence leaves that person ineligible; it does not block the software release.
5. Create or continue the intended Mock from Mock Bid, then verify its captured version and red MOCK banner. Click a member to see their details and recorded previous bid or assignment. Verified history examples are Douglas: 2025 B401, Group 2; Peter: 2025 A109, Group 4. Return to current bidder for the ordinary turn. Choose an open position and A-Day, then Confirm bid. A/B/C positions use numbered groups; Days positions use their saved weekdays. Clicking a position prepares a selection; confirmation records it. A Mock never starts Real or writes staffing assignments.
6. Your Bid sign-in lasts up to 30 days and renews while the visible console is actively used. Every administrative write still verifies your Hub authorization. If renewal fails, select Refresh operator sign-in and Recheck sign-in first. Sign in through Hub only when the session cannot be verified, then return and recheck. Your prepared selection and reason remain here. If the bid changed while you signed in, review the latest state and acknowledge it before confirming. No command is submitted automatically during renewal or recovery. If an accepted action cannot refresh, refresh the bid before another action; the accepted action is already recorded.

7. To make a selection outside the ordinary order, use Adjust bid above Available positions, or select a waiting member and choose Bid for this member. Choose any included member and open position, Skip member for now, Defer member for later, or Bypass current step · keep its picks pending. Review the server advisories, enter your reason, acknowledge the warnings and explicitly confirm. Skipping or bypassing keeps the deferred picks available. Use Correct a bid for someone who already holds a position; its override preserves the earlier award in history.
8. Historical reference: the September 30 cutoff remains sealed in Version 11 (SHA-256 90060771da87f17014cee0b60daa325e3e50a8d1e16c71ea83fa960c8d69d320). Version 14 was a later reviewed source update, ID 01M3Y18H7HXCYN8CPCVRK0916E, SHA-256 fb2e62eb0d7af7196f77debf2e0baa47e1761d107fb30155ef0e23baaf8fab98. Its ordinary cohort had 38 Lieutenants and 39 open Lieutenant seats, with no shortage. Peter's historical Version 14 Mock is 01M3Y1KT5E2VX5W3QQRHGK7WDB. These records are provenance examples, not the current-version requirement. Never replace sealed evidence or silently change a frozen run.
9. Open Live Bid and select Check Real Bid with the authorized operator signed in. This read-only check identifies remaining blockers and their sources. Resolve them and check again. When authorized and ready, Confirm Real Bid creation creates the reviewed run; Start Real Bid is a separate action.
10. In Results, choose the exact saved run and inspect its pinned version, awards, A-Day, audit and exports. A Mock result cannot become a Department assignment. External publication and staffing transition require their own authorized workflows.

Controls

2026 BID READINESS · Version history · Bid Blueprint · Review participants · Review credentials · Marine evidence · Check Mock readiness · OPEN MY MOCK · Record selection · Confirm bid · Return to current bidder · Correct a bid · Adjust bid · Refresh operator sign-in · Load final 5:00 PM snapshot · Check Real Bid

Use the current on-screen Real readiness result. Historical October 2 verification of Version 14 showed 27 Real-only reviews and a credential import dispute; Real was not started and staffing writeback was off. Those historical results do not establish current readiness. Person-specific credential exceptions and policy reviews require their own evidence. Creating and starting Live remain separate controlled actions; a readiness check grants no activation authority.

2. Edit and save the Current Bid

Bid

Change policy language, requirements, points and Bid settings in one place. A material Save records a new version automatically; a no-op keeps the current version, and earlier settings remain available in History.

Open: [Bid](#) — [Edit Bid](#)

How to use it

1. Open Bid and choose an existing year. Use the editing sections to change the draft. Moving between Edit Bid, Blueprint and Mock retains the same unsaved draft.
2. Search all opportunities and qualifications. Saved references stay visible even when a catalog item is missing. An Operations pair, an all-qualifications requirement and an OR group have different meanings; review the explicit controls.
3. Use shared rule profiles for requirements or points that apply to several opportunities. Save Bid checks and applies those profile changes to the affected rules automatically. Optional review shows the affected opportunities and candidate impact before saving; it is not a separate required approval step.
4. Connect an opportunity to an actual Department staffing position when needed. A different connection starts as Needs review with no inherited authority. Enter its evidence reference and review it explicitly.
5. Policy decisions can record questions and interpretations where needed. Leave an unfinished decision open; complete the decision and its source before marking it resolved.
6. Source policy awaiting operational decisions preserves unfinished procedures. Blank values remain unresolved. With complete settings, participants, authority and dates, select Use reviewed procedures in this draft. Save and run readiness remain separate.
7. The reviewed October 1 Version 5 credential comparison was applied in historical Version 14. Verify the current saved source receipt for later changes. Compare later credential updates in Department → Import data and review individual exceptions there; a blank date does not resolve an existing evidence hold. Existing records and the original cutoff snapshot remain available.
8. Return to the saved 2026 Bid with no unfinished edits. Expand Update reviewed source files and select Review latest source. Check the imported revision, qualification exceptions and eligibility dates, then select Capture reviewed update with its review note. The server records the source receipt; this action does not save the Bid or start a run.
9. After the recorded receipt is verified, select Load reviewed update into draft. Review the changes and select Save Bid to create a new version. Existing sessions keep their previous source. If capture is interrupted, use Retry retained capture; if only its verification failed, use Verify recorded update. If the server confirms the changed-source request was not recorded, review the latest source again. If a newer saved Bid makes a verified receipt inapplicable, use Keep recorded update and return to source review. Authentication refresh never submits the action automatically.

10. Select Save Bid to record changes, administrator and time. Change summary and preview are optional. No year unlock is needed. Changed settings create a new version; unchanged settings keep the current version.
11. A saved version does not change an existing run. New Mock runs must select a saved version explicitly. Editing or saving does not publish policy or start Live bidding.
12. If a response is interrupted, retain the draft and use Retry original request to recover its receipt. Do not reconstruct the request or assume no save occurred.

Controls

Bid year · Open · Policy & language · Participants & flow · Opportunities & rules · Add shared rule profile · Specialty rules · Contact & disposition · A-Day · Timing & evidence dates · Authority & permissions · Update reviewed source files · Review latest source · Capture reviewed update · Load reviewed update into draft · Change summary · Preview changes (optional) · Save Bid · Discard edits

Browser drafts are scoped to the signed-in administrator and year. Storage failures block protected writes so an uncertain request can be recovered. If the saved Bid changed elsewhere, refresh and review your changes before saving again.

3. Understand the Bid Blueprint, draft impact and decision traces

Bid

Use the interactive Bid Blueprint to inspect authored/local policy relationships. Server Preview and draft impact add separately labeled server facts from the same evaluation authorities used by Bid runs.

Open: [Bid](#) — [Bid Blueprint](#)

How to use it

1. Choose Bid Blueprint. Use Overview, Flow, Policy, Specialty, Opportunities, Members and Changes to focus the relationship map. Select a map node to read its status, source and server-analysis facts. Use the zoom controls or scroll to pan; the Structured relationship list contains the same information without relying on the graph.
2. The map starts with authored local structure, which is not server-evaluated. Server Preview and draft impact facts are separately labeled when available. The browser never calculates eligibility, points, priorities, staffing outcomes or a substitute relationship. An unresolved reference is labeled UNRESOLVED.
3. Review proposed changes checks the configuration differences; Evaluate draft impact calculates the member consequences.
4. Choose Mock or Live participation for the calculation. Both the saved policy and draft use one captured Department source, each evaluated at its own authored dates. Live calculation does not authorize or start a Live session.
5. Inspect affected people, participation changes, stage order and stage or specialty opportunity changes. Eligibility and priority comparisons hold either the requirements or the evidence and participant group constant so the cause remains visible.
6. Use Previous changes and Next changes to reach the complete result set. A new or removed opportunity is marked incomparable, not assigned an invented before or after score. Unavailable calculations remain visible and are excluded from known affected counts.
7. Select a person and opportunity, and optionally another person for comparison. Show decision trace displays passed and failed requirements, all three point channels, priority, the exact tie-break steps, stage applicability and evidence. Post-award obligations are shown separately from initial eligibility.
8. Local edits make earlier results stale. If Department evidence changes between pages or traces, evaluate again. Calculation evidence identifies both policy hashes and the evaluated context.

Controls

Overview · Flow · Policy · Specialty · Opportunities · Members · Changes · Zoom in · Zoom out · Structured relationship list · Review proposed changes · Participation for this calculation · Evaluate draft impact · Changed eligibility and priority · Eligibility by opportunity · Trace member · Trace opportunity · Comparison member (optional) · Show decision trace · Calculation evidence

Preview writes no versions, receipts, audit events or session data. A-Day capacity, next-bidder choices, actual specialty interruptions and awards require an explicit selection scenario and are not predicted by the configuration-only comparison. A valid calculation is not publication or run readiness.

4. View history and restore earlier settings

History

Find earlier settings and bring them back with Restore this version. Your current settings remain in History too.

Open: [Bid](#) — [Version history](#)

How to use it

1. Open Version history for the selected Bid year. Versions are listed newest first; Load older versions reaches the full history.
2. Select a version to inspect its recorded reason, author, source language, opportunities and captured authoring provenance. The selected historical content is read-only.
3. Save or discard unfinished edits so restoring does not lose them.
4. Select Restore this version. The settings become a new current version, and the restoration is recorded automatically. No separate review or reason form is required.
5. The earlier version and any runs using it retain their original evidence. Interrupted restoration requests use the same retained receipt recovery as Save Bid.

Controls

[Version history](#) · [Load versions](#) · [Load older versions](#) · [Restore this version](#)

Restoring changes the Current Bid for future work; it does not overwrite history, retarget an active run or replay an old session.

5. Start a new annual Bid from saved structure

Bid

Create the next annual configuration from a saved Current Bid version without rebuilding its reusable opportunity, rule, profile, flow, specialty, A-Day, contact or fallback structure.

Open: [Bid](#) — [New Annual Bid](#)

How to use it

1. Save the current Bid first. New Annual Bid is available only from its exact immutable saved version, not from browser edits or a live session.
2. Enter the new year, its new annual dates, an expected duration, an informational timer and a review reason. Confirm that the next cycle requires fresh review.
3. Create non-executable annual draft copies reusable structure into a separate year and records a first immutable version. A lost response can be retried safely; it never silently creates another year.
4. Open the new year and review participants, explicit member inclusions or exclusions, credentials, staffing bindings, A-Day distributions, operator grants, ordering authority, source decisions and annual policy before preparing a Mock or Managed Live session.

Controls

New Annual Bid · New Bid year · Personnel and staffing evaluation date · Credential evaluation date · Expected duration · Informational turn timer · Carry-forward reason or authorization · Create non-executable annual draft

The new annual draft never copies occupants, frozen participant IDs, credentials, prior approvals, active sessions, old dates, operator permissions, ordering authority, membership distributions or member-specific A-Day constraints. It is intentionally non-executable until the ordinary annual review and readiness workflow is complete.

6. Create a Mock from an exact saved version

Bid

Check the current saved version against Department evidence, then create an isolated Mock with that exact policy and captured context.

Open: [Bid](#) — [Mock Bid](#)

How to use it

1. Save or discard draft edits, then open Mock Bid. Mock creation uses the saved version; it never silently saves your draft.
2. Check readiness. Review the saved version, member pool and any blocked source, staffing, qualification or tenure evidence. Resolve blockers in the appropriate Department or Bid workspace.
3. Create Mock submits the reviewed version and evidence identities. If the Department context changed, run the readiness check again before creating.
4. Select Open created Mock Bid to open its compact setup workspace. Preview member details and previous assignments, then select Start Mock Bid to activate the saved order. Starting does not award a position. Check the intended Mock and confirm each selection explicitly. Later edits to the Current Bid do not change its pinned policy or evidence.
5. After an interrupted response, retry the retained request to recover the original created session. The recovery does not create another Mock, even if the session has since progressed.

Controls

[Mock Bid](#) · [Check Mock readiness](#) · [Create Mock Bid from Version](#) · [Retry original request](#)

Creating a Mock does not start it or authorize Live operation. Legacy Auto Bid and manual simulations reject runs that require the reviewed-policy command controls. Use the session operator console for those runs; do not switch to a real Bid to rehearse.

7. Review and create a Managed Live session

Bid

Check a saved Bid version, then explicitly confirm creation of a Live session using that reviewed version and Department evidence.

Open: [Bid — Live Bid](#)

How to use it

1. Save or discard draft edits, then open Live Bid. The preflight is available only for the exact current immutable saved version.
2. Select Check Real Bid. The server either reports the sealed policy preparation block or the complete readiness result for that saved version.
3. Read each blocker and resolve it in the indicated workspace. The readiness check is read-only and does not create or start a session.
4. When readiness permits creation, review the saved version and captured Department evidence, then select Confirm Real Bid creation only for the intended Bid. Creation does not start bidding.
5. Edits, a newer saved version or changed Department evidence require a fresh readiness check and confirmation. A locked Bid cannot create another run through this flow.
6. If the response is interrupted, use Retry original request to recover the same creation request. Refreshing retains that request; do not assume a missing response means nothing was created.

Controls

Live Bid · Check Real Bid · Confirm Real Bid creation · Retry original request

Creation and Start are separate actions. Open the intended created session in the authorized operator console; never start a real Bid merely to test readiness.

8. Set stage order, pools, fallback and A-Day rules

Bid

Describe the approved order, interchangeable opportunities and selection limits using explicit sources and scopes.

Open: [Bid](#) — [Edit Bid](#)

How to use it

1. In Participants & flow, set the order for each stage and connect it to the resolved policy decision. Department seniority and time in grade use separate source-certified Bid rankings. For the approved 2026 mapping, Rank Seniority supplies time-in-grade order and Straight Seniority supplies department-service order. These rankings do not supply hire or promotion dates. Missing facts or unresolved ties prevent that order from being used.
2. In Specialty rules, configure station or float pools only when their capacity slots are interchangeable. Enter the pool name, kind, source clause and source decision; choose the slots in reservation order. Their requirements, ranking, shift and applicable policy scopes must agree. Daily apparatus placement remains separate.
3. Configure fallback policies with the affected opportunities and source decision. Add tiers in the approved order, their qualification requirements and seniority direction. The system derives the next eligible candidate and advances only after the earlier tier is exhausted; a force action does not waive qualification rules.
4. In A-Day, enable the source-backed execution model. Ordinary selections may choose an A-Day with the position; an approved Specialized Timeline can instead defer an exact opportunity or shared-profile scope until after position selection. Every exception needs its source and concrete frozen opportunity scope; overlapping scopes are rejected. Enter any exact officer count. Name each limit and select its actual positions, members, ranks and shifts. A label does not choose members automatically.
5. When an approved timing exception applies, verify the position award first, then use the displayed later A-Day action for the same member and frozen opportunity. Read back its receipt and group-limit result. A later A-Day does not create a second award.
6. In Specialty membership distribution, choose Reviewed existing members or Wider qualified pool only after the population decision is resolved. The existing-team option distributes its reviewed members. The wider-pool option permits reviewed qualified candidates to elect membership with their selection. Select the members, required specialty qualification where applicable, shifts and limits explicitly; membership does not add another staffing position. The SWAT choice between the current six and a wider qualified pool must be resolved before Real activation.

Controls

Participants & flow · Specialty rules · Configure opportunity pools · Add opportunity pool · Pool source decision · Capacity slot · A-Day · Choose A-Day at the same time as the assignment · A-Day selection timing · Add A-Day timing exception

Save Bid preserves the policy configuration. It does not resolve an open source question, supply missing personnel facts or change an existing run.

9. Read results for a selected Bid run

History

Choose a Mock or Live run and read its recorded awards, A-Day selections and completion evidence.

Open: [Bid](#) — [Results](#)

How to use it

1. Open Results for the intended Bid year and choose a Bid run. Check whether it is Mock or Live before interpreting its awards.
2. Review the recorded member, opportunity, pool or membership details and A-Day. Read the source and completion status; unavailable award evidence is shown as unavailable rather than replaced with records from another run.
3. For a Mock, confirm the selected run's finalization state and compare its award count with the full audit export. A completed Mock remains an isolated rehearsal.
4. Use Refresh results to reload that selection. Use Decision history to open History for that run and inspect the recorded actions and their reasons and evidence.
5. For a verified completed Live run, Generate final result package makes its frozen results available as JSON and CSV. An authorized operator distributes them externally by email and TargetSolutions. Generating or downloading the package does not send or publish it.
6. Record authorized external publication evidence separately for Email distribution and TargetSolutions bulletin. Review the outcome, publication date, evidence reference and reason, then confirm. Recording evidence requires current administrator access and the run's publication authority. Corrections add history; they do not erase prior reviews. Retry an interrupted unchanged request to recover the same review.
7. Completed evidence for both channels means external publication evidence was recorded, not that this application delivered it. Mock runs offer a read-only Department transition rehearsal; they cannot publish official results or apply the projected changes.

Controls

[Results](#) · [Bid run](#) · [Refresh results](#) · [Decision history](#) · [Generate final result package](#) · [Download final package \(JSON\)](#) · [Export final results \(CSV\)](#) · [Record authorized external publication evidence](#)

Results and History are read-only when viewed. Recording external publication evidence is a separate explicit action. Viewing results, generating a package or downloading it does not create or start a run, record an award, send results or apply Department staffing changes.

10. Record Bid rankings and completed Days tours

Department

Maintain reviewed annual ordering and completed-tour facts separately from personnel dates and current assignments.

Open: [Department](#) — [Bid evidence](#)

How to use it

1. Choose the Bid year and inspect the recorded ranking revision. Upload the reviewed JSON mapping with stable employee and member identifiers, source hash, source reference, reason and expected revision. Check the source and member count before selecting Save reviewed Bid ordinals.
2. Rank Seniority means time-in-grade Bid order; Straight Seniority means department-service Bid order. Importing these rankings does not calculate or change hire dates, promotion dates or employment status. Missing or conflicting evidence must be resolved before the affected order can be used.
3. For Completed Days Bid tour evidence, choose the member and review the recorded history. Enter the effective date, whether the member has completed a full Days Bid tour, the source reference and reason. Leave the finding Unknown when the source does not establish it, then select Save reviewed tour evidence.
4. A current Days assignment or elapsed service does not establish a completed full tour. An unknown finding cannot satisfy a fallback rule requiring no completed Days tour. Saved corrections retain earlier evidence; existing Bid runs retain their captured facts.

Controls

Bid year · Reviewed ordinal mapping · Save reviewed Bid ordinals · Member · Effective date · Reviewed finding · Source reference · Reason · Save reviewed tour evidence

Use reviewed source facts. Saving this evidence does not alter assignments, authorize a forced selection or change an existing run.

11. Find and update a Department member

Department

Review one person's assignments, employment status, service dates, qualifications and recorded history in the year-round Department workspace.

Open: [Department](#) — [People](#)

How to use it

1. Open Department and search by name or employee identifier. Choose an as-of date and employment status, then select Search. Use the page controls to reach the complete result set.
2. Select a member. Check their identifier, dated status and assignments, qualification evidence and history. Service dates and seniority show the latest recorded information; they are not reconstructed historical values.
3. Choose Update member, then Employment or assignment for a promotion, demotion, transfer, vacancy, retirement, separation, reactivation or correction. Choose Credential change to record qualification evidence. The selected person remains attached to the form.
4. Enter the effective date, reason and required fields. Assignment choices show the dated roster. Review the server preview and the before/after information. A preview can still be rejected at submission if the underlying records change.
5. For a new employee, choose Add member and enter the authoritative identity and employment details. Review new member shows the details you entered; it performs no server validation or write. Confirm and record new member submits the existing employment change service.
6. Cancel leaves recorded data unchanged. Dirty forms ask before discarding. If a result is unconfirmed, keep the form and retry its retained request to recover the receipt. Accepted changes refresh Department and related working views.

Controls

[Search people](#) · [As of date](#) · [Employment status](#) · [Previous / Next](#) · [Add member](#) · [Update member](#) · [Employment or assignment](#) · [Credential change](#)

Unknown evidence remains unknown. Department employment and qualifications do not rewrite completed Bid evidence or the configuration already pinned to a running Bid.

12. Maintain Department staffing and organization

Department

Review dated positions, occupants and vacancies, then maintain staffing capacity and the organization that contains it.

Open: [Department — Roster & organization](#)

How to use it

1. Choose Assignments & positions and a staffing date. This view uses the same Department staffing source as Today and does not require annual Bid policy.
2. Add a reviewed authorized position using the actual shift, organization labels and position details. Shift entry is editable; the application does not assume four permanent shifts. Use the member link to change an occupied assignment or fill a vacancy.
3. To retire a position, enter the effective date and reason and load its impact. Review the dated assignment and organization records and every blocker. Retirement ends authorization on the preceding day and retains history. A future assignment can block retirement even when the position is vacant today.
4. Choose Organization to add or revise stations, groups and apparatus. Select the viewing date, review the parent and record the effective date, evidence reference and reason. Existing identities and earlier revisions remain available.
5. A retirement requires a successful, unblocked impact for the selected identity and date. Resolve linked active or future children and positions first. The server rechecks existing dependencies at submission.
6. Use the reviewed link form to associate an existing position with an organization identity. The link changes its dated placement; it does not create a position or assign a member. Finish or cancel local edits before changing views or dates.

Controls

Assignments & positions · Organization · Staffing as of · View staffing · Refresh staffing · Add authorized position · Retire · View organization as of · Save organization · Confirm retirement · Save reviewed link

Capacity, organization and membership are distinct records. Retiring an organization does not delete its history or silently retire its positions. Accepted changes refresh Today and Department according to their effective dates.

13. Maintain credential definitions

Department

Maintain the names and operational meaning of credential definitions independently of the Bid points awarded for them.

Open: [Department](#) — [Credentials](#)

How to use it

1. Open Department — Credentials to search the complete catalog and review a definition.
2. Add or revise the descriptive fields using an authoritative name and classification. Department does not expose Bid point controls; editing a definition preserves existing stored point values.
3. Use People and Update member — Credential change to record a person's evidence, issue or renewal, expiration, withdrawal or correction. Catalog definitions and member evidence remain separate.
4. Review how a credential is valued within the Bid configuration before relying on it for eligibility or points.
Renaming a Department definition does not change its stable identity or replace a running session's evidence.

Controls

[Search](#) · [Add credential](#) · [Edit](#) · [Record qualification evidence](#)

A credential definition is not proof that a member holds it. A member's dated evidence is not itself an instruction to award Bid points.

14. Import Department data

Department

Review TeleStaff assignments and TargetSolutions qualifications from one Department destination while preserving each source's validation and receipts.

Open: [Department](#) — [Import data](#)

How to use it

1. Choose TeleStaff assignments or TargetSolutions credentials. The selected source and retained import stay in the page address so a review can be resumed.
2. Select the actual source file and inspect its parsed records, matched employee identifiers, exceptions and proposed dated changes. Names corroborate identity; they do not replace exact identifier matching.
3. Resolve required reviews using the existing source-specific controls. Do not guess missing dates or silently apply adverse qualification changes.
4. Apply only after reviewing the proposed effect. Repeated imports and retries retain the existing source hashes, progress and idempotency receipts. A loaded review alone is not proof that changes were applied.
5. After an accepted apply, review Department People and Today at the effective date. Qualification evidence and assignments refresh automatically. Follow the detailed TeleStaff or TargetSolutions topic for source-specific steps and recovery.

Controls

TeleStaff assignments · TargetSolutions credentials · Upload · Review · Apply

Importing assignments or qualifications does not start a Bid, promote policy, or enable writeback. Keep an unconfirmed operation open until its result can be recovered.

15. Navigate focused workspaces

Getting started

Work within the browser frame while keeping complete records and advanced controls available.

Open: [Today](#)

How to use it

1. Use Today, Department, Bid and History as the main starting points. The arrow beside each menu opens and closes its links independently of navigation. The full sidebar can also collapse. On a phone, open the navigation menu and close it with X or Escape.
2. Member lists, catalog editors and bid-day actions open in focused panels. The title and close control remain visible; long details scroll inside the panel. Closing a panel does not cancel an action that was already submitted. Wait for its receipt before retrying.
3. Today opens the current Department staffing picture. Choose a date and shift; use Previous roster page and Next roster page to reach every position on desktop. Department holds People, Roster & organization, Credentials and Import data. The Bid Board separately shows Bid opportunities and results; existing roster exports and print views remain available.
4. Annual Bid remembers the selected year across its linked workspaces. Expand Setup, staffing and sessions for the actual designated rules, staffing source, dates and session links. Each session is marked Practice or Real bid.
5. Use the preparation step selector on smaller screens. Long rule and operating-policy forms show one section at a time; switching sections retains all fields. Show all sections remains available for a full review.
6. On bid day, select the current member and an available opening in the session workspace. Open More controls for Specialty and contact, Presentation, Correct a bid or Remaining order. Active specialty review opens its contact panel and can be collapsed and reopened. Presentation controls remain distinct from pausing bidding; all actions retain the session policy and operator checks.
7. Use How to use this page for task instructions. Docs shows one selected topic, with search and a collapsible detail view. Download the complete PDF or offline HTML manual when you need all topics together.

Controls

Expand or collapse menu · Close panel · Previous / Next · Station or pool · Preparation step · How to use this page

Today uses explicit roster pages on desktop without nested roster scrolling. Phone and tablet views scroll normally. Other workspaces retain focused detail panels, search, paging and full exports.

16. Review source conflicts and record amendments

Annual preparation

Keep unresolved policy questions and approved decisions attached to the year and the configuration they affect.

Open: [Source decisions and changes](#)

How to use it

1. Choose the correct year. Open a source check or record a new change. Read the stored policy and inspect the linked configuration before deciding whether the discrepancy is already resolved.
2. Record the question, affected area, source reference and applicable date. Choose Needs a decision for an unresolved material issue; it blocks a new setup approval while preserving existing approved history.
3. Choose Resolved only when the authorized policy decision is supported. Record what was decided and its source. Saving preserves all earlier revisions; another administrator cannot silently overwrite your decision.
4. Apply resulting configuration changes in the linked area, regenerate impact review and practice, then approve through Annual Bid. Recording a source resolution alone does not edit positions, qualifications or policy rules.

Controls

2026 source checks · Record a new change or question · Decision status · Supporting policy · Applies from · Save source decision · Open affected configuration · Decision history · Stored policy language

For a year with a saved Current Bid version, use Bid — Edit Bid, Bid Blueprint and Mock Bid. These older authoring controls are compatibility paths for years not yet adopted; they cannot modify a versioned Bid. The 2026 checks identify discrepancies observed in the supplied files. They do not overturn existing approvals or invent new policy. The Daily Shift Staffing Guidelines are not the annual seat-count authority.

17. Change this bid after a Labor/Management decision

Annual preparation

Carry an approved staffing or policy change through dated evidence, configuration, impact review and practice while preserving prior decisions.

Open: [Annual Bid](#)

How to use it

1. Confirm the affected bid year and approved decision, scope and dates. If setup is approved and no Real session exists, choose Prepare changes to this approved setup in step 1. Review the personnel and qualification dates, cite the authorized change, and create an editable successor. The prior book, policy and approval evidence remain preserved; copied positions and staffing links require review. This does not start bidding.
2. For a new, altered or retired authorized position, use Staffing to record the dated structural change. Then use Annual Bid — Organization and seats to include the reviewed opportunity in an editable annual plan. A vacancy is not automatically a bid opening.
3. For shared qualification, service, points or priority changes, use Requirements and priorities. Follow the sections for scope, qualifications, service and training, then points and ranking. Qualification checkboxes can be searched and selected without keyboard shortcuts. A narrower position exception must explain which inherited requirement it changes. Preview resolved rules to see the final requirements, alternatives, points, caps, ranking and source profiles together.
4. For contact, sequencing, A-Day or specialty procedures, use Operating policy. Choose one policy section at a time or Show all sections; Show one section collapses them again. All fields retain their values when switching sections. The outcome summary describes what each disposition actually does. Expand its edit controls only when the approved decision changes that behavior.
5. Save unfinished work to preserve a private editor draft. Restore saved work after returning or signing in again, then recheck the source revision and regenerate the preview. A private draft does not approve or publish a rule.
6. Use Review and impact to inspect added/removed opportunities, eligibility and ranking changes, preference references and capacity effects. What needs another review identifies changed input groups since the last saved review. Unchanged bid inputs can reuse an otherwise matching completed practice; current revision and readiness checks still apply.
7. Run the practice scenarios linked to the current plan and approve only the setup that was reviewed. An approved setup with Real-session history cannot be reopened by editing a form. Use a permitted correction workflow or prepare a future-year draft; never rewrite prior awards or invent a successor authorization.

Controls

Bid year · Prepare changes to this approved setup · Organization and seats · Requirements and priorities · Operating policy · Review and impact · Practice and approve

For a year with a saved Current Bid version, use Bid — Edit Bid, Bid Blueprint and Mock Bid. These older authoring controls are compatibility paths for years not yet adopted; they cannot modify a versioned Bid. The software executes approved rules but cannot decide which conflicting policy document or amendment Labor/Management adopted. Keep those source questions unresolved until the responsible authority supplies a decision.

18. Import TargetSolutions credentials

People and qualifications

Compare a credential CSV against exact Employee IDs and existing qualification history. Review only changes and exceptions, then apply approved records in resumable groups.

Open: [TargetSolutions import](#)

How to use it

1. Export the credential report from TargetSolutions and keep its report header. Select the CSV and choose Upload and compare. Enter a report date only when the file does not contain one; a supplied date cannot contradict the report.
2. Read the coverage notice. The September 2026 active-only export does not contain issue or expiration dates. Its missing rows never remove, revoke or expire qualifications. Active source records do not automatically earn points.
3. Choose a category to review new qualifications, missing dates, renewals or exceptions. Employee IDs are exact identities; names are displayed for corroboration only. Unknown IDs must be reconciled in People using authoritative records.
4. When many unfamiliar names are distinct definitions, expand Review distinct new credential names in one batch. Select the names, confirm they are not existing aliases, and register them with zero points. Failed assessments and reference-only identifiers must still be mapped individually. Registration creates definitions only; inspect and apply the refreshed member changes separately.
5. For an unfamiliar credential name, enter a review note and choose an existing qualification, a distinct new qualification, or reference-only treatment. Reference-only assessments do not grant a qualification. Failed assessments and DO NOT USE items require explicit classification. Alternatives under a rule are not necessarily the same certificate.
6. Save the mapping and review the refreshed comparison. Creating a distinct qualification assigns zero informational points; only approved annual rules determine eligibility and scoring.
7. Enter the review note and choose Apply reviewed records. Ready additions, renewals, missing information and unchanged references are reconciled in groups. The progress report and saved import remain available if interrupted. Temporary Hub authorization failures are retried with increasing waits, for at most five retries. Stop after current group also cancels a pending retry and leaves completed work saved. Denied access and stale reviews are never retried automatically.
8. Inspect an expiration or revocation individually and use its approval button only after checking the source and existing evidence. Conflicting evidence requires an individual qualification correction and a refreshed comparison.
9. To correct a saved name mapping, expand Review or correct a saved credential mapping, select the source name and intended destination, and save with a review note. Previous applications remain in history; inspect affected member records for a separate evidence correction.

10. A source assertion can be rejected with a reason using Keep current record. This preserves the source row, resolves that assertion, and changes no qualification. Rejection is not evidence that the current record has been independently verified.
11. Resume the saved import to finish remaining items. If a sign-in renewal is needed, use Sign in again and return to this import, enter your review note and apply the remaining records. Re-uploading the same file returns that import rather than duplicating qualifications. Applied records retain the source row and evidence history. Refresh comparison after another administrator updates relevant records.

Controls

TargetSolutions CSV · Report date · Upload and compare · Resume a saved import · Change categories · Refresh comparison · Review note · Save mapping and compare · Apply reviewed records · Approve this expiration · Approve this revocation · Stop after current group · Previous 100 · Next 100

A successful import does not certify that every expiration is current. Blank dates preserve known information. Approved and historical bid evidence is not rewritten by a credential upload. Corrections require source evidence; never change a date just to award points.

19. Requirements and points

Annual preparation

Inspect the selected rule book and open a position rule to review required qualifications, preferred points and tie handling.

Open: [Requirements and points](#)

How to use it

1. Choose the intended year and rule book. Inspect a position and its effective requirements before editing.
2. Use the annual preparation profiles for shared requirements; use a position-specific exception only when its scope is supported by the policy.
3. Required qualifications control eligibility. Preferred points and tie-breakers order eligible members. Review the effect in a practice bid before approval.
4. Use numeric points only when the policy provides them. A cumulative qualification preference counts each satisfied criterion once, including its alternatives and prerequisites. Qualification priority compares criteria in their stated order before cumulative credit; it does not assign larger invented point values. Enter the source for each preference group and any qualifications that exclude the group. For example, an IAAI-first rule can limit secondary-course credit to candidates without IAAI.

Controls

Rule book · Position rule · Required criteria · Points preferences · Tie-break order

For a year with a saved Current Bid version, use Bid — Edit Bid, Bid Blueprint and Mock Bid. These older authoring controls are compatibility paths for years not yet adopted; they cannot modify a versioned Bid. Changing a catalog default is not a change to an approved annual scoring rule. In Advanced completion credit, specify the approved decision, start and end dates, and optional member scope. This permits only the stated scoring item to use recorded completion after expiry; mandatory requirements, prerequisites and revoked records remain excluded. Never enable an exception merely to reproduce a desired score.

20. Qualification discrepancies

People and qualifications

Review separately staged qualification evidence and the source supporting each proposed change.

Open: [Qualification review](#)

How to use it

1. For a TargetSolutions CSV, use Import TargetSolutions credentials. This page retains the existing individual review-batch workflow.
2. Select the review batch and inspect its source, member reference, qualification and dates.
3. Resolve identity or qualification mismatches before accepting a row. Record the reviewed decision, then apply accepted evidence using the available action.

Controls

Source system · Source reference · Review batch · Accept · Reject · Needs review · Apply

A review decision and an applied qualification are distinct. Historical bids keep their original evidence.

21. Qualification readiness

People and qualifications

Inspect dated qualification evidence and identify expiring or expired records for follow-up.

Open: [Qualification readiness](#)

How to use it

1. Select the applicable review date and search by person or qualification.
2. Open the member qualification history to verify the source and record a supported correction or renewal.
3. Use the selected bid eligibility review to determine the actual effect on bid opportunities.

Controls

Review date · Search · Classification

Readiness information does not itself award points or override mandatory qualifications.

22. Temporary assignments and year-round operations

Year-round staffing

Review temporary operational changes while preserving the underlying permanent assignment.

Open: [Year-round operations](#)

How to use it

1. Select the member and verify the underlying assignment.
2. Record the authorized temporary change, its effective period and source.
3. When the temporary assignment ends, record its actual end date and review the resulting staffing view.

Controls

Member · Effective date · Temporary assignment · End assignment · Source and reason

A temporary overlay must not become an unreviewed permanent bid award.

23. Create a bid session

Bid day

Create a practice or real session only from a configuration that meets the applicable readiness checks.

Open: [New bid session](#)

How to use it

1. Prepare and review the selected annual plan first.
2. Choose the year and explicitly distinguish practice from real bidding.
3. Read any readiness blockers and follow the linked preparation workflow. A real session requires the approved configuration and authorized operating policy.

Controls

Bid year · Session mode · Create session

For a year with a saved Current Bid version, use Bid — Edit Bid, Bid Blueprint and Mock Bid. These older authoring controls are compatibility paths for years not yet adopted; they cannot modify a versioned Bid. A practice session is never an official result or a staffing source.

24. Import qualification definitions

People and qualifications

Review a spreadsheet of qualification definitions and informational defaults without assigning certificates to people.

Open: [Catalog import](#)

How to use it

1. Use the TargetSolutions importer for member credentials. This catalog import is for qualification definitions.
2. Select the supported normalized or legacy-wide spreadsheet mode and preview its definitions.
3. Resolve duplicate labels, identity collisions and retired qualifications before committing the reviewed catalog.

Controls

Spreadsheet · Import mode · Preview · Review source · Commit

This catalog workflow does not synchronize individual member qualifications or change frozen bid points.

25. Choose a personnel import workflow

People and qualifications

Find the controlled replacement for the retired direct roster import.

Open: [Personnel import guidance](#)

How to use it

1. For assignments and employee reconciliation, follow the TeleStaff workflow.
2. For an individual employment or rank change, open People and the corresponding dated personnel form.
3. For member certificates, open Import TargetSolutions credentials.

Controls

TeleStaff import · Personnel changes · Qualification import

Do not recreate people to resolve an import discrepancy. Preserve existing Employee IDs and account relationships.

26. Tenure and Protection

Year-round staffing

Review dated protection terms for an authorized staffing seat.

Open: [Tenure and Protection](#)

How to use it

1. Choose the staffing date and authorized seat.
2. Record the reviewed status. For a protected term, identify the member and exact inclusive dates from the source. Use unknown when a decision is unresolved.
3. When the source includes term totals, enable Record service and bid cycles. Enter the term member, accumulated service months and consecutive bid cycles together. For a protected seat, the term member must match the protected member. Enter reviewed totals, including a verified zero; do not estimate them from dates or seniority.
4. Provide the source and review reason. Saving appends a revision; it does not change an assignment.
5. Read back the seat, member, inclusive dates, reviewed status and source reference in Evidence history. If the source does not establish a term, leave it unresolved and seek administrator evidence.
6. In Annual Bid, review the seat participation and canonical holder. Active protection blocks biddable participation and mismatched holder evidence. Expired protection does not close a future annual seat automatically.

Controls

Staffing date · Authorized staffing seat · Evidence effective date · Reviewed status · Protected member · Protected from · Protected through (inclusive) · Record service and bid cycles · Reviewed service and cycle holder · Accumulated service months · Consecutive bid cycles · Authoritative source reference · Record reviewed tenure · Evidence history

Service completion and annual reopening are different facts. Completed service can establish a right to leave, while bid cycles determine reopening. Neither these totals nor a source reference records voluntary departure consent or removes incumbent protection. Absence of a tenure record is not proof of unprotected status. Existing frozen sessions retain their original dated evidence.

27. Post-award Qualifications

Year-round staffing

Track configured follow-up qualifications against final accepted award events and record reviewed completion evidence.

Open: [Post-award Qualifications](#)

How to use it

1. Configure post-award qualifications separately from initial prerequisites in annual profiles or the individual rule editor. Select final-award timing or an explicit approved bid start date. Cite the authority for the date, period and calendar zone.
2. After an official bid completes, choose that session and a review date. Read the frozen term, due date and award reference.
3. Open Review evidence and record completed, pending or unknown status with a dated source and reason. Update Qualification Evidence separately when a certification record requires a change.
4. Revisions retain their history. A stale revision is rejected and form edits remain available for reconciliation.

Controls

Official completed bid · Review as of · Review evidence · Review effective date · Reviewed status · Verified completion date · Evidence reference · Record review · Review history

Missing award evidence leaves the deadline unknown. Award-based terms restart at the final replacement award; approved-start terms retain their frozen date through amendments. Do not substitute session creation or assignment dates for the approved bid start. Calendar-month deadlines clamp to a shorter month's final day. Past-due review does not remove an assignment or impose discipline.

28. Service Evidence

Year-round staffing

Record dated, source-supported cumulative service totals for annual service requirements without inferring tenure from a current assignment.

Open: [Service Evidence](#)

How to use it

1. Choose the existing member and service category. Add a category only when an authoritative policy calls for one.
2. Enter the cumulative completed months supported by the cited source and the effective date. Select unknown when the evidence cannot establish a total.
3. Provide the source reference and reason, then save. Later corrections create a new revision and preserve earlier dated evidence.
4. Add the service category and minimum months in the annual profile or position rule editor. Review annual participant evidence before freezing.

Controls

Member · Service category · Effective date of this evidence · Verified cumulative completed months · Cumulative service is unknown and requires review · Authoritative source reference · Record reviewed service evidence · Evidence history · Add a service category

Totals are reviewed source facts, not automatically calculated months. Unknown evidence does not satisfy a service requirement. Saved frozen sessions keep their original service evidence.

29. Annual Bid

Annual preparation

Start or resume the designated annual draft and review organization, dated participant evidence and scoped rules.

Open: [Annual Bid](#)

How to use it

1. Choose the year and resume a saved draft, start blank, or select a verified official prior completion. Enter reviewed personnel and qualification dates, duration and turn timer.
2. An existing unpublished designated draft can enter guided preparation through Adopt reviewed draft. Review its dates and confirm the proposal. Shared templates, published configurations and years with a Real session require their existing protected configuration path.
3. Maintain organization and authorized seats, then select each annual seat with explicit participation and staffing characteristics. Include a source reference and reason.
4. Use Review seat to reconcile an inherited seat while keeping its identity. Removal requires a source, reason and explicit confirmation. After a conflict, refresh the plan while retaining edits, inspect the current seats, then choose Use reviewed revision and keep edits before resubmitting.
5. Review dated personnel and qualifications in stage 3; correct evidence through Personnel Changes or Qualification Evidence.
6. In stage 4, author department, rank, station/shift, explicitly selected family, or individual-position profiles. Add all required prerequisites and define the total, Special Operations and Marine Operations points channels. Add ranking priorities in order.
7. Preview resolved rules and inspect their source profiles before saving. Requirements accumulate; the most specific points and priority definitions apply. Equal-specificity conflicts require correction.
8. In stage 6, choose the selected official completion or last saved source review as the comparison baseline. Rule effects hold current evidence constant; evidence effects hold prior rules constant. Candidate priorities preserve ties and do not predict choices or awards. Filter results, move through all pages, or export the complete review.
9. Save source review checkpoint to preserve the current prepared evidence for later comparisons. A checkpoint does not publish rules or approve a freeze. Refresh and explicitly adopt displayed revisions if a newer source invalidates your retained review.
10. In stage 7, create a Mock from the reviewed configuration and run it in the Rehearsal Console. If its response is lost, Retry same Mock creation request. Select a completed Mock and review its findings before freezing. The server verifies its completion receipt and exact configuration, then publishes the rule book and annual policy atomically.

Controls

Preparation year · Annual preparation stages · Start annual draft · Adopt reviewed draft into annual preparation · Add reviewed seat to annual plan · Save reviewed annual seat · Confirm reviewed removal · Add profile · Preview resolved rules · Save reviewed rules · Export full review and impact · Save source review checkpoint · Create Mock from reviewed configuration · Approve reviewed bid setup · Upcoming Board

For a year with a saved Current Bid version, use Bid — Edit Bid, Bid Blueprint and Mock Bid. These older authoring controls are compatibility paths for years not yet adopted; they cannot modify a versioned Bid. Changing stages does not approve a review or start a session. Stale drafts retain edits and require review before saving. A blank points channel explicitly awards zero in that channel.

30. Organization

Year-round staffing

Maintain stable stations, organizational groups, and apparatus even before seats exist.

Open: [Organization](#)

How to use it

1. Create a station or organizational group with a reviewed effective date and source reference. Creating an organization creates no seats.
2. Create apparatus under an existing reviewed station or group. Use Edit for a dated rename, move, or retirement.
3. Review dependency details before retirement. Close or move dependent apparatus and explicitly review seat links first.
4. Use the seat-link form to associate an existing authorized seat with an organization on the viewing date. Occupancy and source-system labels remain separate.

Controls

Viewing date · Add organization · Parent · Effective on · Lifecycle · Authoritative source reference · History · Link a reviewed seat to organization

A later revision must be reviewed before editing an earlier dated view. Historical names and links remain available in history; no inferred organization-to-seat mapping is created.

31. Bid Board

Year-round staffing

Compare verified previous awards, effective-dated current staffing, and upcoming annual seats in independent views.

Open: [Bid Board](#)

How to use it

1. Select the view and shift. Upcoming also requires a designated annual year.
2. Previous defaults to the latest verified completion. Choose a specific completed official bid to keep reviewing that cycle. Returning to the page or refocusing it checks for newer completions without changing a specifically selected cycle.
3. Use the staffing date to inspect the canonical assignments effective on that day. Temporary context preserves the underlying assignment.
4. Review the source details and lifecycle before interpreting a seat. Previous uses frozen historical names when available; Upcoming contains no occupants.

Controls

[Previous Bid](#) · [Completed official bid](#) · [Current Staffing](#) · [Upcoming Bid](#) · [Shift](#) · [Annual plan](#) · [Staffing as of](#) · [Search this view](#) · [Source and revision details](#)

No verified official completion means Previous is unavailable. A staffing vacancy is not permission to bid a seat. Background refresh retains the last successful data for the same selection when a request fails.

32. Getting started

Start here

Use Bid through your authorized MBFD Hub sign-in. The Admin Console is for year-round staffing administration and controlled Bid operations.

Open: [Today](#)

How to use it

1. Enter Bid from MBFD Hub with your authorized account.
2. Use the left navigation on desktop; select Navigation on a phone or tablet.
3. Use Mock Bids for rehearsal. Current Bid Live checks a saved version and requires separate confirmation to create a session. The Live console is operator-only; creation does not start bidding.

Controls

Admin navigation · Navigation button on mobile · Sidebar links

Hub authentication and the Bid Access PIN serve different purposes. Never treat a PIN as a Hub sign-in method.

33. Today: current Department staffing

Start here

Today shows effective-dated Department positions, occupants and vacancies. It uses year-round staffing records and does not require an annual Bid Rule Book.

Open: [Today](#)

How to use it

1. Choose the effective date and shift you want to view. Shift options come from recorded staffing rather than a fixed list.
2. Read the station and unit groups, member names, position names and vacancies. An empty staffing position is not automatically an available Bid opportunity.
3. On desktop, use Previous roster page and Next roster page when the selected shift needs more than one page. Every record remains reachable and names wrap instead of being silently cut off. On a phone or tablet, scroll through the roster.
4. Check the recorded update time and use Refresh staffing after a change. Today also refreshes periodically and when you return to the window. A failed refresh is shown explicitly; the last loaded roster is identified when retained.
5. Use the staffing and member workspaces to maintain assignments and effective-dated personnel history. Approved organization links control dated station and unit names; unmapped legacy positions retain their recorded labels.

Controls

Date · Shift · Previous roster page · Next roster page · Refresh staffing

Today is read-only. Viewing dates, switching shifts, paging and refreshing do not change Department records, create Bid versions or advance Mock or Live runs.

34. Current Rosters

Year-round staffing

View the reviewed operational staffing projection by A, B, C, D, or all shifts, including vacancies and people not assigned to a reviewed seat.

Open: [Current Rosters](#)

How to use it

1. Choose an effective date and shift scope.
2. Use search and the vacancy or unassigned filters to narrow the projection.
3. Review the roster summary, then download CSV or open the print view when an export is needed.

Controls

[Search](#) · [Shift selector](#) · [As-of date](#) · [Vacancies and unassigned filters](#) · [Reset filters](#) · [CSV download](#) · [Print roster](#)

This page reports the reviewed projection. Resolve a staffing question in its source workflow rather than editing a roster display.

35. Staffing Structure

Year-round staffing

Maintain authorized staffing seats and their occupancy history. An authorized seat is the approved slot; an occupant is the member assigned to that slot.

Open: [Staffing Structure](#)

How to use it

1. Set the effective date before reviewing capacity.
2. Add a seat only when the authorized structure supports it.
3. Use the seat history and occupancy information to confirm the change.
4. Retire a seat only with the reviewed effective date and reason.

Controls

Add authorized staffing seat form · Effective-date filters · Capacity and occupancy view · Retire seat action

Do not create a seat just to accommodate an unmatched source row. A seat and a member assignment are separate controlled records.

36. TeleStaff

Year-round staffing

TeleStaff is a controlled reconciliation workflow: upload, preview, stage, reconcile, review, and then apply only reviewed, safe results.

Open: [TeleStaff](#)

How to use it

1. Confirm whether the source is official or synthetic and verify the snapshot date.
2. Upload and inspect the preview before staging it.
3. Reconcile changes, new positions, unknown employees, incomplete topology, and source mappings.
4. Review safe exceptions and export the sanitized reconciliation package when needed.
5. Apply only after reviewed exceptions are resolved or formally retained.
6. After a committed official import passes completeness checks, use the two-step baseline confirmation. It will atomically supersede the prior acceptance receipt while preserving that receipt in audit history.

Controls

Upload · Preview · Stage · Reconcile · Review · Apply · Designate selected-year staffing baseline · Sanitized reconciliation export

Never invent a seat or identity for an unknown employee or incomplete topology. Baseline confirmation writes an acceptance receipt to production D1, but it does not start a Bid session and does not write back to TeleStaff.

37. Members and Member Roster

People and qualifications

Find members, open their profile and assignment context, and use the Master Roster for searchable roster review and order controls where available.

Open: [Members](#)

How to use it

1. Open Members to find a record.
2. Open the member profile to review assignment context and history.
3. Use Member Roster to search or review roster-level information.
4. Use Personnel Changes for controlled lifecycle changes instead of treating a profile as an edit surface.

Controls

Member list · Profile links · Member Roster · Search by name or employee ID · Roster filters · Move up and down controls

Member records and their operational assignment history are not interchangeable with a staffing seat.

38. Credentials & Specialty Points

People and qualifications

Use the credential catalog and member credential records to understand qualification holders and specialty-point values.

Open: [Credentials & Specialty Points](#)

How to use it

1. Search the credential catalog and use Previous or Next to browse. Select View members to open a focused panel immediately. Search within that panel, page through every member, or open qualification history. Close with the X or Escape. A loading error offers Retry loading members.
2. Choose Add credential or Edit to open the catalog editor in a panel. A closed unfinished edit can be resumed. Change the display name, informational points or retirement date and supply a reason for the audited change.
3. Review active and draft policies, referenced members, qualification history events, and frozen snapshots before retirement. Historical evidence remains unchanged. If another administrator changes the record, preserve your notes, cancel the stale edit, and reopen the current record.
4. Open the related member record to inspect qualification context.
5. For a catalog spreadsheet, open Import Qualification Catalog and choose the layout. A normalized XLSX has name and fy_points_default columns. For a legacy matrix, explicitly enter the number of leading employee metadata columns; existing default points are preserved.
6. Select Preview proposed changes. Review every proposed create, update and unchanged entry, and resolve every reported error. Previewing does not change the catalog or grant qualifications to members.
7. Enter the authoritative source reference and review reason, check the review confirmation, and apply the reviewed import. A changed catalog requires regenerating and reviewing the proposal. After a lost response, retry the unchanged submission to retrieve its original receipt.
8. Confirm whether you are viewing year-round values or frozen annual-Bid values.

Controls

Credential catalog · Add credential · Edit display name and default points · Retirement date and dependency preview · Search credentials · Holder count · Member credential records · Credential import workflow

A frozen annual-Bid value is evidence for that Bid; it is not a shortcut for changing the year-round credential record.

39. Personnel Changes

People and qualifications

Record effective-dated personnel lifecycle and assignment changes while preserving an immutable history of what changed and why.

Open: [Personnel Changes](#)

How to use it

1. Choose the reviewed change type: new hire, promotion, demotion, transfer, reassignment, retirement, separation, or correction.
2. Set the effective date and complete the relevant member and assignment fields.
3. Review the preview and history before committing.
4. Record the reason and retain any policy-pending or configuration-pending status.
5. After a successful save, personnel and dependent staffing and annual-plan views refresh automatically. Previous Bid retains its completed historical evidence.

Controls

Change type · Effective date · Member and assignment fields · Reason · Preview/history · Temporary overlays

Use a correction to correct a reviewed record; do not overwrite historical facts. Temporary overlays are distinct from permanent staffing changes.

40. Qualification Evidence & Review

People and qualifications

Record whether a qualification is gained, expires, or is revoked, and use the review areas to understand readiness and Bid eligibility impact.

Open: [Qualification Evidence](#)

How to use it

1. Open Qualification Evidence for the relevant member and qualification.
2. Choose Add, renew or correct certification, or the appropriate expiration, revocation or specialty action. Enter the applicable dates, source and reason. Preview bid impact before recording the evidence: the preview calculates eligibility, points and candidate priority at each configured annual cutoff without saving anything. A blocked year is identified explicitly. It does not simulate choices, capacity or awards.
3. Close the impact panel, adjust the form if needed, and select Record qualification evidence. Check the receipt and refreshed history. Approved session snapshots and historical awards remain unchanged. Use Qualification Review for unresolved source discrepancies.
4. Check readiness before relying on a qualification for eligibility.

Controls

Qualification lifecycle · Evidence fields · Qualification Review · Readiness view · Preview bid impact

Specialty-qualified status and supporting evidence must remain traceable; do not mark an unverified qualification as ready.

41. Bid Setup

Annual preparation

Bid Setup organizes the annual preparation sequence and shows whether the selected year has usable configuration.

Open: [Bid Setup](#)

How to use it

1. Select the Bid year.
2. Review configuration status and resolve blocking or unconfigured conditions.
3. Prepare controlled rules, positions, policy, and eligibility before creating a session.
4. Use the related setup links rather than bypassing a blocked configuration.

Controls

[Bid year](#) · [Configuration status](#) · [Rule Books](#) · [Positions](#) · [Rules](#) · [Eligibility Preview](#) · [Bid Access PIN](#)

For a year with a saved Current Bid version, use Bid — Edit Bid, Bid Blueprint and Mock Bid. These older authoring controls are compatibility paths for years not yet adopted; they cannot modify a versioned Bid. A year with missing or blocking configuration is not ready for live operations.

42. Rule Books

Annual preparation

Rule Books hold controlled Bid rules as drafts and revisions. Publishing is a deliberate, protected action with a recorded reason.

Open: [Rule Books](#)

How to use it

1. Create or open the appropriate draft.
2. Record scope and the reviewed operational reason.
3. Review coverage and revision details.
4. Publish only when the authorized revision is ready.

Controls

Create draft · Rule Book form · Revision reason · Publish action · Publish confirmation

For a year with a saved Current Bid version, use Bid — Edit Bid, Bid Blueprint and Mock Bid. These older authoring controls are compatibility paths for years not yet adopted; they cannot modify a versioned Bid. Published rules are controlled evidence. Do not publish a draft merely to make a configuration appear complete.

43. Positions & Rules

Annual preparation

Review configured positions by shift and open a position rule to manage participation, rank or category criteria, eligibility, and tie-break order.

Open: [Positions](#)

How to use it

1. Choose the relevant shift and position.
2. Open its configured rule.
3. Review participation, category or rank, eligibility, and tie-break settings.
4. Save only the reviewed rule change and re-check the result.

Controls

Shift position list · Edit configured rule · Rank checkboxes · Eligibility criteria · Tie-break order controls · Save rule

For a year with a saved Current Bid version, use Bid — Edit Bid, Bid Blueprint and Mock Bid. These older authoring controls are compatibility paths for years not yet adopted; they cannot modify a versioned Bid. Position rules define eligibility; do not change them to fit an individual result.

44. Eligibility Preview

Annual preparation

Eligibility Preview shows how current configuration evaluates eligibility before an award is made.

Open: [Eligibility Preview](#)

How to use it

1. Select the applicable preview configuration and member. Confirm its rule-book version and qualification evidence source.
2. Run the server preview for that member and opportunity.
3. Review why the result is eligible, ineligible, or unavailable. A secondary rule-book result may describe a different configuration; it does not establish eligibility for a saved Current Bid version.
4. Correct the underlying controlled record if authoritative review requires it.

Controls

Eligibility form · Position and member inputs · Preview result

A preview is not an award and does not change a live session.

45. Bid Access PIN

Annual preparation

The Bid Access PIN is an additional operational access control used in the Bid application; it is separate from MBFD Hub authentication.

Open: [Bid Access PIN](#)

How to use it

1. Confirm you are authorized to change the PIN.
2. Enter the new approved PIN in the protected form.
3. Complete the change and communicate it only through the approved channel.

Controls

PIN input · Change PIN button

Do not share a PIN in this guide, in exports, or in regular administrative notes.

46. Annual Policy

Annual preparation

Annual Policy builds an executable, versioned policy for Bid stages, order, specialty handling, dispositions, contact requirements, A-Day limits, and revision evidence.

Open: [Annual Policy](#)

How to use it

1. Start with the approved year and policy version.
2. Configure and order stages, specialty policy, dispositions, contacts, and A-Day limits.
3. Review blocking or unconfigured status and correct it through the approved policy process.
4. Use preview and revision history before publishing or freezing evidence.

Controls

Policy version · Bid stages and order · Live action authority · Disposition rules · Contact policy · Specialty policy · A-Day limits · Preview and revision history

For a year with a saved Current Bid version, use Bid — Edit Bid, Bid Blueprint and Mock Bid. These older authoring controls are compatibility paths for years not yet adopted; they cannot modify a versioned Bid. Keep policy-pending and unconfigured states visible. A frozen policy preserves what governed that annual Bid.

47. BID Advisory

Rehearse and operate

BID Advisory immediately describes authoritative results already calculated by deterministic BID application rules. There is no AI or model generation delay.

Open: [Live Bid & Advisory](#)

How to use it

1. Open Live Bid & Advisory for the active or selected session.
2. Read the advisory sequence and evidence labels with the live board.
3. Use the controlled Bid workspace for any authorized operational action.

Controls

Read-only advisory cards · Evidence-source labels · Authoritative sequence

Decision Details explain why the current result is displayed. They do not make decisions, change eligibility, award positions, calculate a second outcome, or change staffing, policy, assignments, or session state.

48. Mock Bids

Rehearse and operate

Mock Bids are isolated rehearsals for validating sequence, selections, amendments, specialty handling, order changes, findings, and operator readiness.

Open: [Mock Bids](#)

How to use it

1. Create or select a Mock session and open its session controls.
2. For a Mock using reviewed annual policy, open its operator console and select Start Mock Bid if it is not started. The compact setup shows member details and previous assignments before Start. Existing session controls also provide Start session. Confirm the intended Mock and record its selections, A-Day choices, fallback responses and amendments there.
3. To correct a recorded Mock selection, open More controls and select Correct a bid. Choose the exact recorded award, replacement position or revocation, A-Day and reason. Select Review correction, inspect Before and After and the policy checks, then select Confirm correction. Earlier awards can be corrected while results remain unsealed. Revocation leaves an unresolved correction that must be resolved before completion. Verify the updated award and appended audit event.
4. If a command response is interrupted, reopen the same Mock and inspect its canonical roster and audit sequence before retrying. An accepted receipt means the action already occurred.
5. Legacy Auto Bid and manual simulations reject runs that require these command controls. Use them only for supported legacy rehearsals. Record findings for the workflow you actually exercised.
6. Use Freeze rehearsal when an unfinished canonical Mock must be quarantined. Complete it only after every participant and correction is resolved. Canonical sessions preserve their audit history and cannot use legacy reset or stale-close controls.
7. Verify the mock audit before treating the rehearsal as complete.

Controls

Active Mock Sessions · Findings · Auto Bid · Start session · Open session operator console · Freeze rehearsal · Reset mock · Close stale mock · Verify audit

Mock commands remain isolated from Department staffing and portal writeback. Creating a Mock and starting it are separate steps. Do not start a real Bid just to test a workflow.

49. Live Bid

Rehearse and operate

Live Bid is the operator console for an authorized administrator running an actual Bid session. It shows the active bidder, on-deck members, timer, phase, and protected controls.

Open: [Live Bid](#)

How to use it

1. Confirm the session, phase, active bidder, and on-deck order.
2. Click a member to inspect their details and previous bid. Only the authorized Admin or operator records a selection. Selecting a waiting member does not change the current turn; use Return to current bidder to prepare the ordinary selection.
3. Use Adjust bid or Bid for this member for an exception. Choose any participant and open seat, set or change A-Day, or assign a temporary duty. Review the advisories, add a reason and confirm. Existing seats stay assigned during temporary duty; Change or remove an award moves a member or frees a seat.
4. Skip or defer a member without losing their rights. Bypass current step moves its pending turns later. Change recorded awards through Correct a bid; earlier awards stay in history.
5. A station or float pool reserves its next available slot. Check remaining capacity before confirming; daily apparatus placement is separate.
6. Choose A-Day with a normal award. For early awards, use Pick A-Day later; the software prompts at the member's ordinary rank turn. Adjust bid can change A-Day or bypass staffing advice after review. Final minimums remain visible at completion.
7. Fill remaining seats shows ordered fallback candidates and recorded responses. Review contacts and evidence, then confirm the next voluntary or forced award.
8. More controls opens returns, specialty review, fallback, presentation, corrections and bid order. The same controls apply to Mock and Real.
9. Use session controls for pause or resume where the session state permits.

Controls

Current bidder · On deck · Choose member · Return to current bidder · Confirm bid · More controls · Correct a bid · Adjust bid · Refresh operator sign-in

Adjust bid is available only to operators granted that authority in the captured Bid. Each confirmed action records the operator, reason, warnings and audit history. Ordinary members do not make live selections here. Term departure still requires the member's explicit consent and evidence.

50. Specialty Adjudication

Rehearse and operate

Specialty Adjudication records a controlled specialty review with the original bidder, eligible higher-priority candidates, points or rank, contacts, outcomes, and exact resumption state.

Open: [Specialty Adjudication](#)

How to use it

1. Before an authorized specialty action, read the Specialty coverage advisory when it is available. It is derived from the frozen session snapshot and canonical fills; it describes coverage risk but does not approve, block or change an operator action.
2. Start the specialty review from the live controls when authorized.
3. Review the original bidder, requested position, candidate order, policy status and any available advisory.
4. Record each contact attempt and disposition.
5. Record an accepted specialty award once for the displayed candidate. If the frozen policy permits deferred A-Day timing for that opportunity, confirm the award receipt and pending A-Day state, then record its later A-Day through the displayed action.
6. Complete the adjudication and confirm the suspended bidder resumes at the recorded queue state. Review the audit sequence for the candidate responses, single award and resumption.

Controls

Specialty review state · Specialty coverage advisory · Candidate list · Contact attempts · Accept · Decline · Pass · Unreachable · Evidence and reason fields

This area includes synthetic rehearsal support. Keep synthetic and real activity distinct, and do not substitute a synthetic result for live evidence.

51. Live Presentation

Rehearse and operate

Department presentation controls decide what the presentation shows: OFF, LIVE, HOLD DISPLAY, or RESUME DISPLAY.

Open: [Live Bid](#)

How to use it

1. Enter the required operator reason and any policy-required evidence reference.
2. Choose the intended display mode.
3. Check the command response before continuing operations.

Controls

OFF · LIVE · HOLD DISPLAY · RESUME DISPLAY · Operator reason · Evidence reference

HOLD DISPLAY is not the same as pausing Bid execution. Display controls do not pause the live Bid.

52. Results & Audit

Records and handoff

Results & Audit helps you review recorded events and the immutable evidence associated with controlled actions.

Open: [Audit Log](#)

How to use it

1. Choose the event and date filters.
2. Search for the relevant record.
3. Review the recorded action and supporting context.
4. Use History to inspect saved Bid changes and canonical Live actions, including selections, corrections, fallback responses and completion. Filter the intended session and action rather than assuming the newest event belongs to the run you are reviewing.
5. For a completed Mock, inspect the finalization receipt and reconcile its award count to the run-specific roster and full audit export. An unfilled simulated specialty opportunity needs source review before being called a final staffing shortage.
6. Use the related Exports or Award Transition workspace when appropriate.

Controls

Event filter · Date filters · Search · Audit results · Exports · Bid Award Transition

Immutable evidence means the system preserves the recorded operational history; it does not mean every item is automatically approved for downstream action.

53. Exports

Records and handoff

Exports provides controlled roster and Bid export generation, direct CSV downloads, available packages, and portal-sync status.

Open: [Exports](#)

How to use it

1. Select the intended session when the export requires one.
2. Choose the correct export type or direct CSV download.
3. Wait for the generated package to appear and verify its scope before distributing it.
4. Review portal-sync status rather than assuming a write occurred.

Controls

Select a session · Generate · Direct CSV downloads · Available exports · Retry action · Portal sync status

An export is evidence or a file delivery mechanism; it does not itself authorize a staffing or portal change.

54. Bid Award Transition

Records and handoff

Bid Award Transition is a fail-closed review workspace for a completed Bid becoming future staffing on a selected effective date.

Open: [Bid Award Transition](#)

How to use it

1. Select a completed Bid from its session controls.
2. Review current-to-new assignments and the effective date.
3. Record the reviewed reason and acknowledgement.
4. Apply only when the transition is authorized and the workspace allows it.

Controls

Completed Bid selection · Assignment comparison · Effective date · Reason · Review acknowledgement · Apply reviewed transition

Portal writeback is currently disabled. Do not represent a reviewed transition as portal writeback or assume external systems were changed.

55. System & Integrations

Records and handoff

System & Integrations presents user-facing health and integration status for Hub federation, TeleStaff, and writeback safety.

Open: [System/Integrations](#)

How to use it

1. Review the displayed status before relying on an integration.
2. Use the related operational workspace for any permitted action.
3. Treat unavailable or fail-closed status as a stop for the dependent action.

Controls

Health and status indicators · Integration status

A healthy status indicator does not grant permission to deploy, change external systems, or enable writeback.

56. Common workflows

Help and safety

Use these short paths to begin common tasks without turning the guide into a single long procedure.

Open: [Current Rosters](#)

How to use it

1. Update staffing: Current Rosters → Staffing Structure or Personnel Changes.
2. Process TeleStaff: TeleStaff → upload → preview → stage → reconcile → review → apply.
3. Add or promote a member: Personnel Changes → effective date → preview/history → record.
4. Prepare a Bid: Annual Bid → follow the preparation steps → Review and impact → Practice and approve → controlled session.
5. Run a rehearsal: Mock Bids → findings → verify audit.
6. Export safely: Results & Audit → Exports → verify package scope.

Controls

Open this page links · Section navigation · Guide search

For specialty requests, prior-selection amendments, presentation controls, and live operations, use their dedicated guide sections before acting.

57. Troubleshooting & safety

Help and safety

Use the displayed condition and its source workflow to resolve missing records, unavailable actions, policy holds, stale advisory state, and Mock-versus-live confusion safely.

Open: [System/Integrations](#)

How to use it

1. Member or position missing: verify the effective date and source workflow; do not invent an assignment or seat.
2. TeleStaff row unknown or incomplete: retain the exception and seek authoritative mapping.
3. Button unavailable or step-up required: confirm authorization and the required state before retrying.
4. Policy blocking or unconfigured: complete the approved policy/configuration work.
5. Advisory sequence behind the board: reload Live Bid and verify the authoritative sequence before acting.
6. Uncertain response after a reconnect: reopen the same session and read its canonical state and audit receipt.
Retry only if the action is absent; never assume a timeout means no award was recorded.

Controls

Status indicators · Blocked notices · Step-up prompts · Guide search

Never start a real Bid merely to test it, and never treat Mock Bid behavior as proof of live authorization or a canonical staffing change.

58. Glossary

Help and safety

Plain-language definitions for the terms used across year-round staffing, annual Bid preparation, and live operations.

Open: [Administrator Guide](#)

How to use it

1. Canonical roster: the reviewed operational roster record.
2. Authorized position: an approved staffing seat; vacancy: an unoccupied authorized seat.
3. Assignment: a member's placement; effective date: when a change takes effect.
4. Reconciliation: review of source information against controlled records; source mapping: an approved connection to source data.
5. Frozen policy: the preserved policy evidence for an annual Bid; Bid stage: an ordered phase of the process.
6. Specialty interruption: a controlled pause for specialty review; step-up authentication: an additional confirmation for protected actions.
7. Mock/rehearsal: isolated practice; live presentation: what the department display shows; audit evidence: the preserved record of an action.
